ABOUT

I build web applications across the full stack — from API design and database modelling to frontend interfaces that work well and make sense to use. I am currently completing a Master's in Computer Engineering, deepening my understanding of the systems and theory behind the software I write. I am looking for a role where the work is taken seriously, the problems are real, and there is room to keep getting better at the craft.

EDUCATION

MSc in Computer Engineering

Polytechnic University of Tirana

Relevant courses: Advanced Algorithms, Cloud Computing, Machine Learning, Distributed Systems

Oct 2025 – Present

BSc in Information Technologies

University of Elbasan

Thesis: Credit Risk Prediction Using Support Vector Machine Classification in R

Oct 2022 – Jul 2025

PROJECTS

Bilingual Estimate Platform 2025

April 2025

React · FastAPI · SQLite · JavaScript

- Designed a robust **FastAPI backend** to automate **bilingual (SQ/EN) PDF generation** with dynamic footer localization and page-based sectioning.
- Implemented JWT-secured CRUD for product management, featuring multipart image uploads and persistent data synchronization via React Query.
- Built a responsive React frontend with full internationalization (i18n), including language persistence and a custom-built estimate management system

Real-Time WebChat Application

November- March 2026

React · FastAPI · WebSockets · PostgreSQL · Python

- Designed a WebSocket server in FastAPI handling concurrent connections with room-based message routing and persistent message history in PostgreSQL.
- Implemented client-side end-to-end encryption for private messages, ensuring data is encrypted before transmission.
- Built user authentication with private conversation support and full message history persistence.

IT Incident Management Platform

Aug 2025

React · FastAPI · PostgreSQL · JavaScript

- Built a modular REST API with FastAPI and PostgreSQL to manage incident lifecycle across multiple states, with service-layer architecture separating business logic from routing.
- Developed a React dashboard with real-time status tracking, incident assignment, and dynamic filtering.
